

Project Walkthrough

SEIS 751 - Web App Design and Development

Individual Project

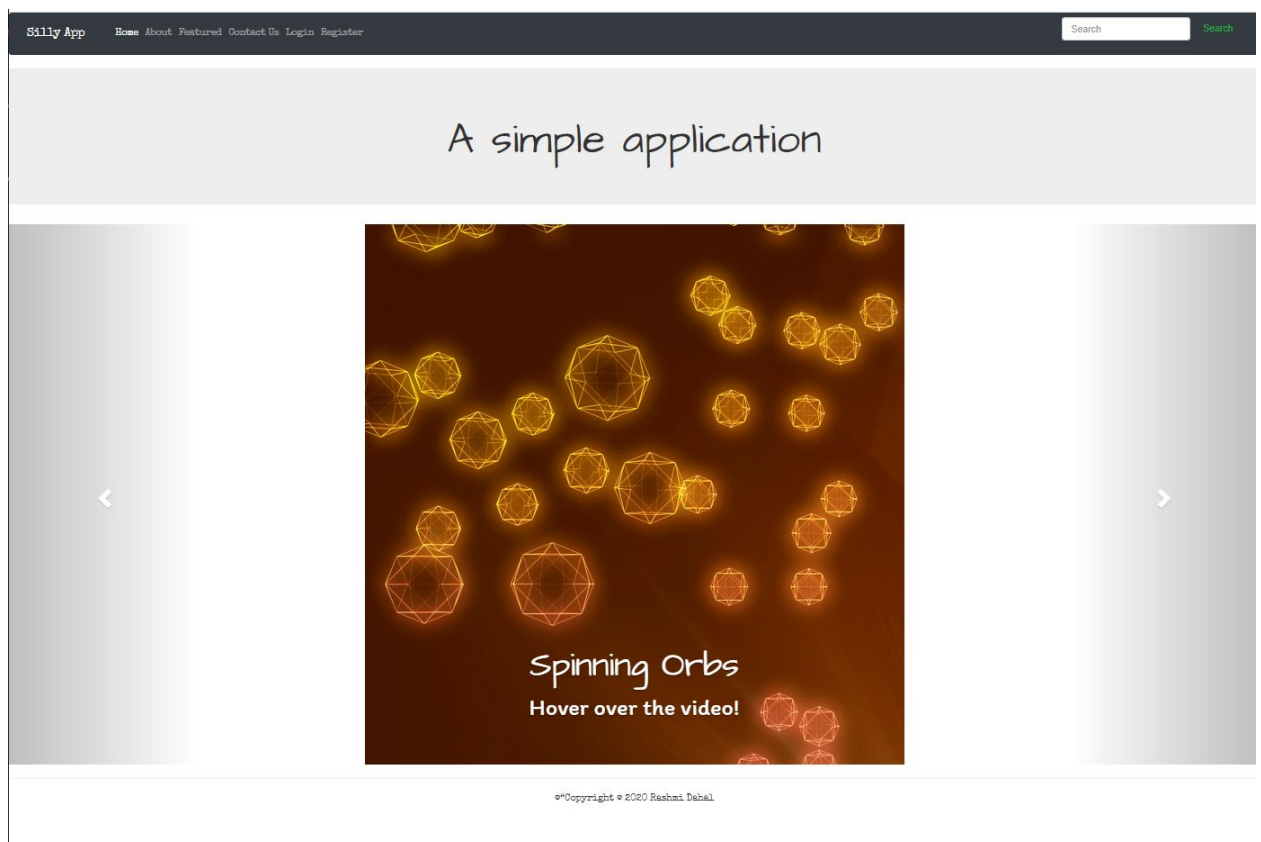

Rashmi Dahal

Index/Home page

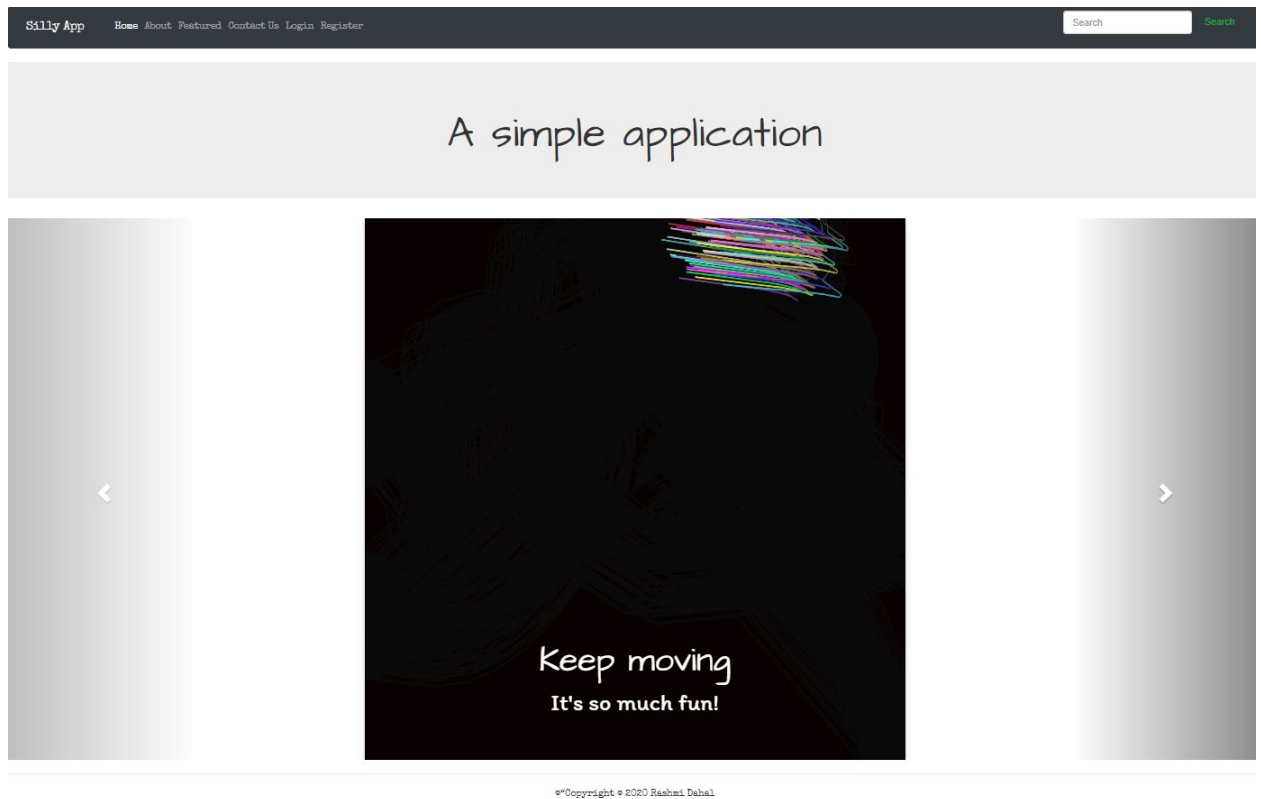

The application's home page has a big carousel element which can be used to go to different interactive elements. There are < and > buttons in the carousel to help navigate to the next and previous items.

Different items in the carousel:-

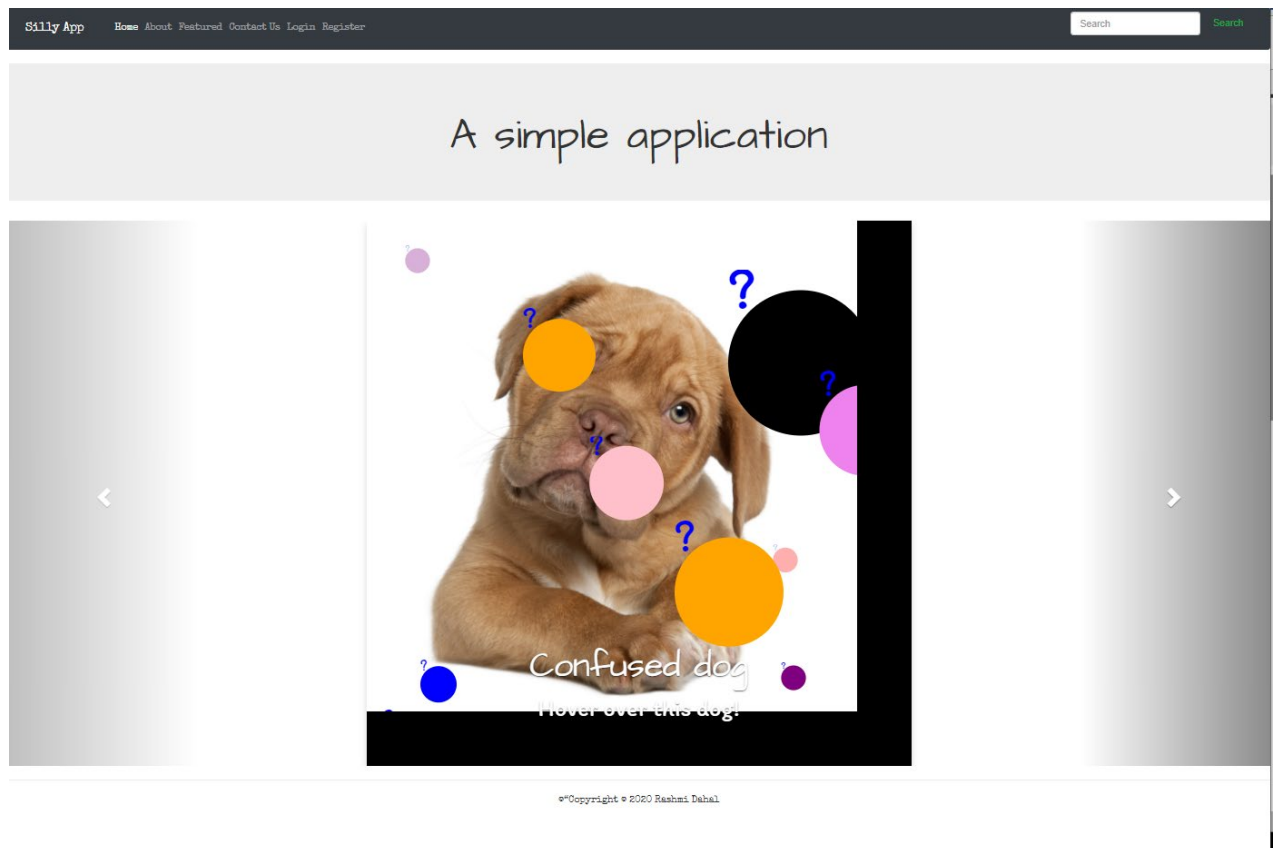

1. Video element – this carousel item is a video element that plays when cursor is hovered over it and stops as soon as it is moved out.

2. Moving mouse animation – This carousel item is a fun canvas animation that I took from one of the tutorials. When mouse is moved around in the canvas, it makes a bunch of fun colorful streaks.

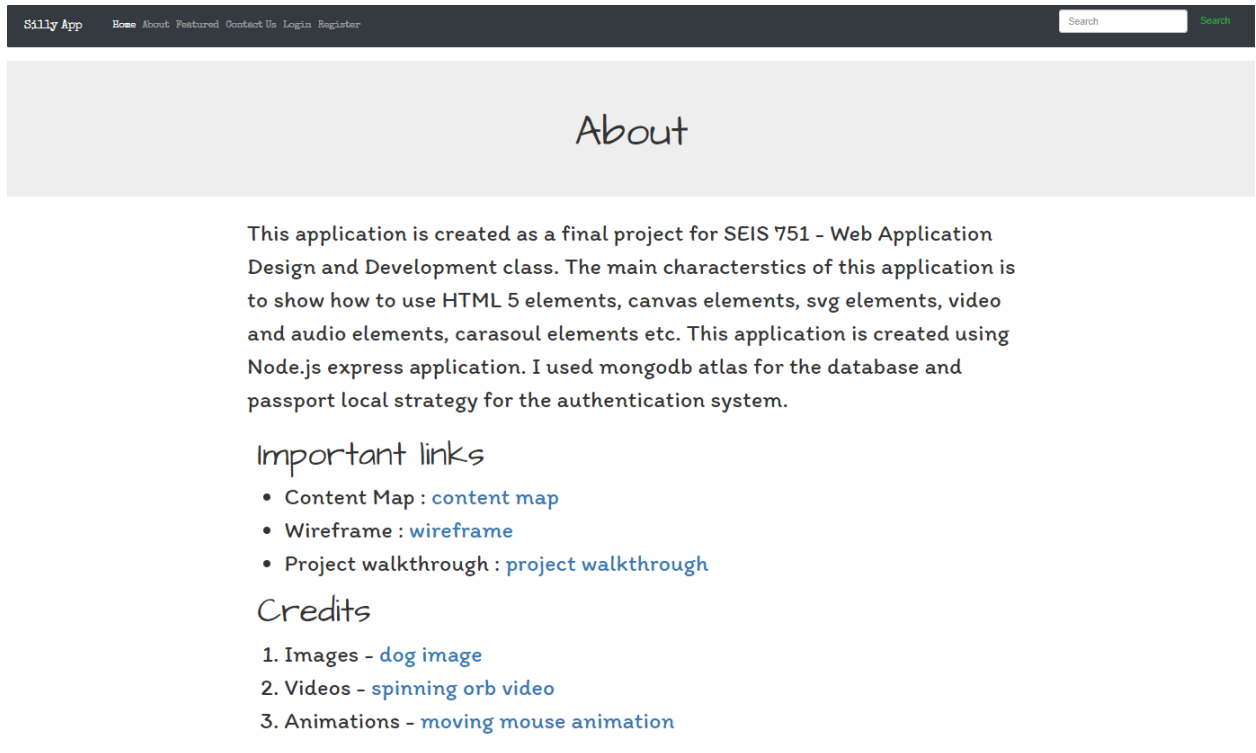

3. Dog animation – This carousel item is an animation that toggles the colorful question marks when hovered over the picture of the dog. I created this simple animation using jQuery toggle function and svg elements.

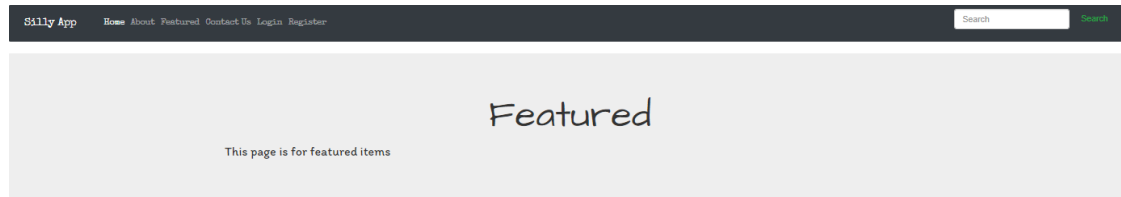

About Page

The second page on this application is about page. This page has a short description about the technical elements of this app and well as the links to various important documents related to the project and credits.

Featured page

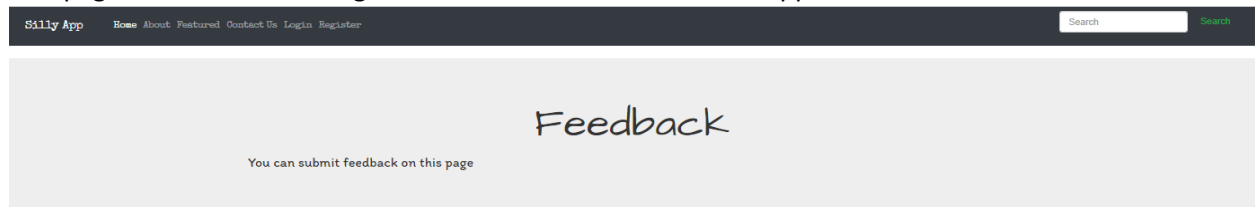

This page is there for future reference. It's empty right now but in future different featured items will be listed on this page.
